(54) **Molecular markers.**

(57) The invention relates to polynucleotide sequences and proteins that are differentially expressed during malignant tumour progression and metastasis in colorectal cancer and which may serve as general molecular markers in primary and metastatic neoplastic disease especially colorectal cancer and which may additionally provide a basis for therapy.

(54) Title: METHOD OF ISOLATING CELLS (57) Abstract <p>The invention provides a method of isolating cells from a faecal stool, the method comprising the steps of a) cooling the stool to a temperature below its gel freezing point, and b) removing cells from the stool whilst maintaining the stool at a temperature below its gel freezing point such that the stool remains substantially intact. The invention further provides methods of purifying cells comprising use of immunomagnetic beads and/or boric acid. Cells isolated according to the invention may be used in diagnostic tests and assay procedures for monitoring a biological or biochemical property of tissue.</p>
